#### Overview of the Event:

A seminar on Data Analytics and Generative AI was organized to provide students with insights into emerging technologies shaping the digital world. The session was delivered by an industry expert who began by welcoming the participants and highlighting the increasing importance of data-driven decision-making in various sectors.

The speaker explained how Data Analytics has progressed from basic data collection and reporting to advanced predictive and prescriptive models used in modern industries. He discussed commonly used tools and techniques such as Excel, Python, Power BI, Tableau, and machine learning algorithms that help organizations interpret and utilize data effectively.

The seminar then shifted to Generative AI, where the expert described how next-generation AI models can create text, images, audio, and intelligent solutions. He explained the working principles of large language models and demonstrated their use in sectors like automation, content creation, smart analytics, and business intelligence. Real-world examples and case studies were shared to help students connect classroom concepts with practical applications.

### Outcome of the program:

The session concluded with an interactive Q&A, giving students the opportunity to clarify doubts about tools, career paths, and industry expectations. The speaker encouraged students to strengthen their analytical thinking, experiment with real datasets, and explore GenAI platforms to build impactful projects. Overall, the seminar motivated students to engage in research, hands-on practice, and continuous learning in the fields of Data Analytics, Artificial Intelligence, and Generative AI.
